

# OPTIMIZED FUNCTIONS FOR MEDICAL G2\_MEDICAL BUNDLE

Ideal for rescue operations: the rescue team's card and the patient's card can be read simultaneously via OPEN SCR and NFC READER.

In combination with the GIANT CORNER GUARDS, the contact surface of the tablet remains straight despite the base of the reader.

The RUGGED HANDLE ensures improved carrying comfort, is extremely stable and designed as a generously proportioned arched handle. This makes the tablet easy to grasp, especially in situations where you need to move quickly. The RUGGED HANDLE is also slightly slanted so that the device rests comfortably and securely on the forearm.

The bundle is designed so that it can be fixed in a docking station in the vehicle (e.g. from HAVIS).

**RUGGED HANDLE**  
Drop resistance up to 1.5 m

**NFC READER**  
Card can be placed at the top and on the back

**OPEN SMART CARD READER**  
Easily accessible card slot

**GIANT CORNER GUARDS**  
Drop resistance for enclosed attachments

## FUNCTION

The MEDICAL BUNDLE combines various solutions to enable emergency services to record data quickly, efficiently and conveniently, especially during operations.
